MISSISSIPPI STATE DEPARTME BUREAU OF PUBLIC WATE	
GCR CERTIFICATIO CALENDAR YEAR 20 Public Water Supply Nat	JANKS
List PWS ID #s for all Community Water Syste	ems included in this CCR
The Federal Safe Drinking Water Act (SDWA) requires each Communi Consumer Confidence Report (CCR) to its customers each year. Deper system, this CCR must be mailed or delivered to the customers, published i customers upon request. Make sure you follow the proper procedures we mail a copy of the CCR and Certification to MSDH. Please check all the contraction of the contrac	ty public water system to develop and distribute a ding on the population served by the public water n a newspaper of local circulation, or provided to the then distributing the CCR. You must mail, fax or boxes that apply.
Customers were informed of availability of CCR by: (Attach co	opy of publication, water bill or other)
Advertisement in local paper (attach copy o  On water bills (attach copy of bill) Email message (MUST Email the message Other	f advertisement) to the address below)
Date(s) customers were informed: ( ) ( ), /	/ , / /
CCR was distributed by U.S. Postal Service or other direct methods used	t delivery. Must specify other direct delivery
Date Mailed/Distributed:/_/	
CCR was distributed by Email (MUST Email MSDH a copy)  As a URL (Provide URL  As an attachment  As text within the body of the email messag	)
CCR was published in local newspaper. (Artach copy of published Name of Newspaper: Date Published:	hed CCR or proof of publication)
CCR was posted in public places. (Attach list of locations)	Date Posted: / /
CCR was posted on a publicly accessible internet site at the following	owing address ( <u>DIRECT URL REQUIRED</u> ):
CERTIFICATION  I hereby certify that the 2015 Consumer Confidence Report (CCR public water system in the form and manner identified above and the SDWA. I further certify that the information included in this the water quality monitoring data provided to the public water Department of Health, Bureau of Public Water Supply.  Name/Title (President, Mayor, Owner, etc.)	I that I used distribution methods allowed by CCR is true and correct and is consistent with
Deliver or send via U.S. Postal Service: Bureau of Public Water Supply	May be faxed to: (601)576-7800
P.O. Box 1700 Jackson, MS 39215	May be emailed to:

CCR Due to MSDH & Customers by July 1, 2016!

## 2015 Annual Drinking Water Quality Report 2016 MAY 18 PM 4: 08 Buckatunna Water Works PWS#: 0770001 April 2016

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Catahoula Formation and the Waynesboro Sand Lentil Aquifers.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Buckatunna Water Works have received lower to moderate susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact Lakisha Henderson at 601.648.2532. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Tuesday of each month at 6:00 PM at the Buckatunna Water Office.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that we detected during the period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2015. In cases where monitoring wasn't required in 2015, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Treatment Technique (TT) - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) – The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

				TEST RES	SULTS			
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measure- ment	MCLG	MCL	Likely Source of Contamination
		inanta						
Inorganio	Contam	mants						

13. Chromium	N	2013*	1.5	1.2 – 1.5	ppb		100	1	100 Discharge from steel and pulp mills; erosion of natural deposits		
14. Copper	N	2013*	.6	0	ppm		1.3	AL=	1.3 Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives		
16. Fluoride	N	2013*	1.03	1.03 .28 – 1.3 ppm		4		4 Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories			
17. Lead	N	2011/13	* 2	0	ppb		0	AL=	15 Corrosion of household plumbing systems, erosion of natural deposits		
Disinfectio	n By-	Product	S								
81. HAA5	N	2013*	8	No Range	ppb	0			By-Product of drinking water lisinfection.		
82. TTHM [Total trihalomethanes]	N	2013*	9.16	No Range	ppb	0			By-product of drinking water lisinfection.		
Chlorine	N	2015	1.30	.5 – 1.7	ppm	0	MDF	RL = 4	Water additive used to control		

<sup>\*</sup> Most recent sample. No sample required for 2015.

As you can see by the table, our system had no contaminant violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected, however, the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. We did complete the monitoring requirements for bacteriological sampling that showed no coliform present. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1-800-426-4791.

The Buckatunna Water Works work around the clock to provide top quality water to every tap, we check and monitor the system each day. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.
